InEight Platform — Company-Wide Rollout

El-Seif Engineering & Contracting · Saudi Arabia · 2023–Present

End-to-end implementation of InEight Project Management with a live two-way REST API integration with ACONEX, scaling to 80+ active users and permanently eliminating 80–100 hours per week of manual document entry.

⚠ CHALLENGE

35 document controllers manually re-entering data between ACONEX and InEight — 80–100 hrs/week lost, high error risk, unscalable.

➦ SOLUTION

Engineered a live bidirectional REST API integration. Designed phased project-by-project adoption strategy. Built automated executive dashboards. Created Digital Governance Framework.

Enterprise AI Workflow Automation Suite

El-Seif Engineering & Contracting · Saudi Arabia · 2023–Present

Deployed a suite of intelligent automation workflows using Claude, Microsoft Copilot, n8n, Emergent, and Lovable — eliminating hundreds of hours of manual work per month across all departments.

⚠ CHALLENGE

Teams spending hundreds of hours monthly on report compilation, data re-entry, document formatting — consuming skilled professionals and slowing decisions.

➦ SOLUTION

Identified high-impact workflows. Built executive dashboard automation. Deployed n8n workflows. Implemented Claude & Copilot across all departments. Created custom AI apps via Lovable & Emergent. Ran data literacy program.

PowerApps Site Inspection Digitization

El-Seif Engineering & Contracting · Saudi Arabia · 2023–Present

Replaced entirely paper-based SOR and site inspection workflows with a custom PowerApps solution on iPads — enabling real-time photo uploads and recovering 4–5 hours per engineer per week.

⚠ CHALLENGE

Site engineers spending 4–5 hrs/week on paper forms, manual photo printing, and data re-entry. No real-time visibility. Data often incomplete or delayed by days.

➦ SOLUTION

Built custom PowerApps with native camera integration and form validation. Connected to SharePoint central database. Configured Power Automate notifications. Deployed on iPads with on-site training.

Oracle PCM → Unifier Migration (Metrolinx)

Metrolinx / Comtech • Toronto, Canada • 2020–2023

End-to-end migration of 120+ live projects and ~6TB of contract data from Oracle PCM to Oracle Unifier — delivered on time, within budget, and 2–3 months ahead of schedule through SQL-driven efficiency discovery.

⚠ CHALLENGE

120+ active projects with no freeze window. Fundamentally different PCM and Unifier data structures. Zero tolerance for data errors on publicly-funded transit programs.

➦ SOLUTION

Full data inventory & SQL workflow analysis (saved 250–300 hrs). ETL pipeline design. Phased migration with live continuity. Tableau & Power BI rollout to 200+ users. P6+ECOSYS integration.

98% Query Reduction — Denodo BI (Trans Alta)

Trans Alta Corporation · Calgary, Canada · 2019–2020

Transformed Trans Alta's BI infrastructure by rebuilding Denodo virtual data models and VQL — cutting critical query execution from 40–50 minutes to 30–40 seconds, enabling near-real-time C-suite decision-making.

⚠ CHALLENGE

Critical reports taking 40–50 minutes to run. C-suite confidence in BI eroding. Denodo models built without performance optimisation across multiple source systems.

➦ SOLUTION

Full query performance diagnostic. Denodo VQL model reconstruction with push-down optimisation. Intelligent caching configuration. Role-based security & data masking. 5 executive Power BI dashboards.

\$10B+ Abu Dhabi Airport Expansion

PARSONS International • Abu Dhabi, UAE • 2009–2011

Supported a 150–200 person program management team on one of the Gulf’s largest aviation infrastructure programs — implementing ARES-PRISM systems that replaced entirely manual reporting and saved 60–80 hours per month.

 CHALLENGE

150–200 professionals compiling monthly executive reports entirely by hand. Dozens of hours lost every month on a decade-long, publicly critical aviation megaprogram.

 SOLUTION

Implemented ARES-PRISM & PRISM G2 for full program controls. Configured monthly actuals & commitment imports. Maintained P6 schedule integration. Automated executive reporting cycle.

\$20B+ Al Raha Beach Development

ALDAR Laing O'Rourke JV · Abu Dhabi, UAE · 2007–2009

Led the Primavera Contract Manager rollout across one of the Middle East's largest real estate programs — training 500–600 users and supporting 1,000 simultaneous active platform users.

 CHALLENGE

Rolling out PCM to 1,000 users across a \$20B program from diverse backgrounds — contractors, engineers, document controllers, commercial managers — in a compressed timeframe.

 SOLUTION

PCM platform configuration aligned to ALDAR LOR workflows. Role-based training for 500–600 users over 12 months. ACONEX integration managed. Monthly executive dashboards aggregating PCM, ACONEX & P6.

Oracle Contracts + Maximo 8-Feed Integration

Cenovus Energy • Calgary, Canada • 2016–2018

Designed and implemented Oracle Contract Management across all Cenovus oil sands projects, and architected an 8-feed Maximo integration — reducing monthly reconciliation from weeks to 2–3 hours.

CHALLENGE

Cost Engineers spending 40–50 hrs/week on manual Access/Excel extraction. Monthly Maximo reconciliation taking several weeks with frequent discrepancies.

SOLUTION

Oracle CM implementation across all oil sands projects. 8-feed bidirectional Maximo integration (AFEs, Contracts, POs, Vouchers, Receipts, Invoices, Actuals, Commitments). Oracle BI reporting & Publisher templates.

\$850M Shuweihat Water Transmission Scheme

PROJACS International · Abu Dhabi, UAE · 2002–2006

Delivered the Primavera Expedition implementation for Abu Dhabi's critical \$850M water infrastructure program — going live in 6 months against a 2-year planned timeline. The project that started a 23-year career.

⚠ CHALLENGE

Implementing Primavera Expedition across 4 geographically distributed UAE sites before cloud deployment existed. 2-year plan allocated — team had no precedent for compressing this timeline.

➦ SOLUTION

Requirements analysis & full system configuration. Citrix-based multi-site deployment architecture. 6-month go-live (75% timeline compression). Structured training for 60 users across 4 sites.

Palm Jumeirah Vehicular Tunnel

PROJACS International · Dubai, UAE · 2002–2006

Supported project controls on one of the world's most iconic construction programs — managing schedule updates, resource loading, and cost-loaded baseline tracking on a subaqueous tunnel beneath the Arabian Gulf.

 CHALLENGE

Subaqueous tunnel construction with zero sequencing margin. High-profile pressure with dozens of contractor interfaces. Managed concurrently with the Shuweihat implementation.

 SOLUTION

Regular schedule update cycles incorporating contractor progress. Resource & cost tracking in Primavera Expedition. Progress reporting & variance analysis. Full application stewardship.
